

## NimbleX - sub100MB Edition

NimbleX has a special edition that is smaller than 100MB but still retains some functionality for a broad variety of tasks.

The most important stuff that you can find in this edition are:

- Kernel 2.6.21
- KDE 3.5.7
- XINE media player engine
- XMMS audio player
- GIMP image editor
- Kopete IM client
- Midnight Commander
- Webcam Support
- Wireless Support
- Remote Desktop
- Spellchecking
- USB Installer
- PDF Reader
- K3B burner
- and others ...

When booted of the HDD NimbleX sub100MB is most likely the fastest distro with KDE. On my machine it boots in ~ 40s

A new and exciting feature is that, if you have a high speed connection, you can use software from the Internet. It's only a matter of a few clicks.

The new stuff that powers this version seem to be much better than they used to be so thanks everybody that worked to make Linux cooler!

Download NimbleX sub100

MD5SUM: 1782eddc1c7b67a95ebe1a70aad7ebae

be used with no problem for a great deal of things if you know your way around Linux.

Download NimbleX 69MB

The packages from this site can't be used with this version but you can use the ones from [HERE](#) to extend these editions.

For those of you who are curious, the package list can be found [HERE](#).
